This report reveals detailed information about a single visit to the site.

*Domain Name* - This is the name of the computer the visitor is using to access the Internet. The "?" next to the domain name will look up the domain name in the Whois database.

*IP Address* - This is the address of the computer used by the visitor to access the Internet. Next to the IP address is the internet numbers registry that is assigned the IP address. The "?" next to the IP address (for upgraded accounts) will look up the IP address in an internet numbers database. If it is known, the organization that has been assigned to manage the IP address is displayed. In many cases this will be the same as the visitor's ISP but not always.

*ISP* - This is the name of the internet service provider used by the visitor.

*Location* - This shows the continent, country, state/region, city and latitude/longitude of the visitor if they are available. If you've identified the lat/long location of your site in the
